Kalam (React.js)

MAJOR PROJECTS

Kalam is a user interface web application to interfacing all admission processes into Navgurukul. It helps to Navgurukul's team for the entire admission process <https://github.com/navgurukul/kalam>

Gift a Deed (React.js)

Gift a deedi is a android base application to provide some emergency stuff for needy person I am cloning that into web application using react.js <https://github.com/pralhad88/React-GAD-app>

Didi (React.js)

Didi is a web application to use women empowerment. user can create their own shop on android app. using web applicaton user can advirties their product with the help of web link. <https://github.com/pralhad88/react-didi-app>

Chat Bot (Node.js)

Here I implemented a basic version of a Daily Horoscop and Jokes API using express framework, cheerio and request module for scraping the data in Node.js. In this chat bot, if user wants to know his daily horoscope then it will give to us and if he is getting bored then ask to chat bot for some funny jokes it will give some jokes to them https://github.com/pralhad88/Chat-bot_in_Node.js

Chanakya (Node.js)

Chanakya is an online testing platform used by the thousands of students who apply to get admission into Navgurukul. It helps manage and track the complete admission pipeline for the admission team. I took care of the end-to-end delivery of the complete platform <https://github.com/navgurukul/chanakya>

NG Exceptions (Python)

I forked an existing library to create a tool for people to get python exceptions in Hindi. Using this module programmers can get different python exceptions translated into Hindi for better understanding.https://github.com/pralhad88/ng_exception
